

SUPREME TOTALONE STICK

THE POWER PLAYER

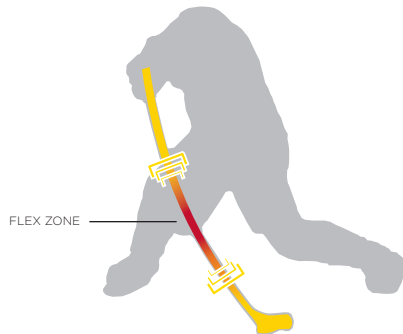

Conceived for the power player, the SUPREME TOTALONE stick is engineered using advanced design principles to maximize a player's shooting performance while exerting minimum effort. The Amplified Mid-Kick profile allows a player to easily load the stick for powerful, heavy slappers and one-timers with effortless releases on wrists and snap shots.

The lighter blade utilizes dual density foams for that soft 'feel' on puck handling and pass reception with increased stability in the blade and hosel region for more accuracy. Exclusive use of light weight TeXtreme® carbon fiber creates a stick that is lighter and better balanced than its predecessors. Every facet of this stick has been cunningly considered resulting in a finely crafted stick that delivers every time you step on the ice.

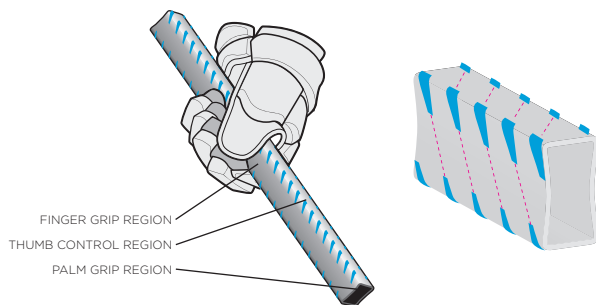

AMPLIFIED MID KICK

Engineered for maximum energy output with minimum effort. Created by using a stiffer lower shaft with a softer middle providing a stick that is easily loaded. Perfect for those who lean heavily into their sticks or want effortless shot release.

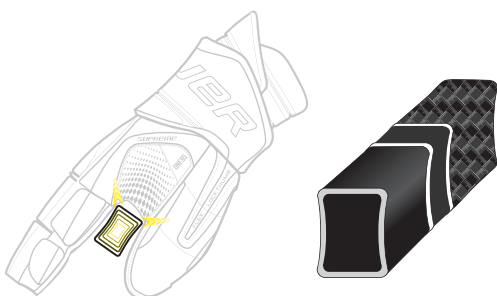

TAC-SPIRAL

Anatomically engineered spiral tactile increases sensory connection and control of the stick. Paired with SUPREME's square corners and double concave shaft walls, players can get a secure grip even in the most aggressive handling and shooting situations.

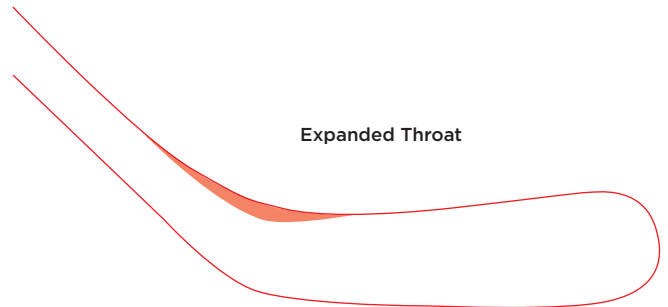

SUPREME POWER SHAFT

The square double concave taper is thicker in the hosel area to working coordination with the mid shaft amplified kick to minimize shaft deflection during powerful shots to optimize energy transfer and keeping blade aligned for accuracy.

PURE SHOT BLADE PROFILE

The optimized blade profile increases the connection point between the blade-hosel transition of the stick; reducing the amount of blade deflection, or the twisting or opening of the blade while shooting, improving blade control and pinpoint shooting accuracy.

MONOCOMP TECHNOLOGY

Our industry-leading single molding process ensures product and performance consistency. By removing excess material like overlapping layers, resin and foam waste, the balance of the stick is improved and overall weight is reduced. This results in easier stick loading and improved energy transfer with every shot.

POWER CORE 3

The Power Core is unique foam reinforced with aramid fibers to absorb impact energy for increased blade 'feel' while adding blade strength. The AERO FOAM II adds stability to the blade reducing deflection and boosts accuracy. Power Core 3 is 11 grams lighter improving the overall weight and balance of the stick.

VAPOR X:60 STICK'UM

A FORM OF HIGHER INTELLI-SENSE

You have to shoot the puck when you have the chance, not when it's convenient —and you need a stick that can respond to your needs in that split second. The new VAPOR X:60 stick is designed with Intelli-Sense shot technology that senses shot type and adapts its flex profile to maximize loading and energy transfer on either wrist or slap shots.

Add the Pure Shot blade profile for improved accuracy, Monocomp Technology for optimized balance and feel and our exclusive use of light weight TeXtreme® carbon fiber and you have our smartest scoring machine to date.

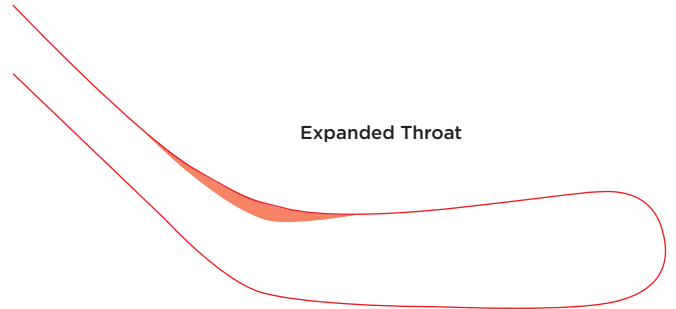

MONOCOMP TECHNOLOGY

Our industry-leading single molding process ensures product and performance consistency. By removing excess material like overlapping layers, resin and foam waste, the balance of the stick is improved and overall weight is reduced. This results in easier stick loading and improved energy transfer with every shot.

PURE SHOT BLADE PROFILE

The optimized blade profile increases the connection point between the blade-hosel transition of the stick; reducing the amount of blade deflection, or the twisting or opening of the blade while shooting, improving blade control and pinpoint shooting accuracy.

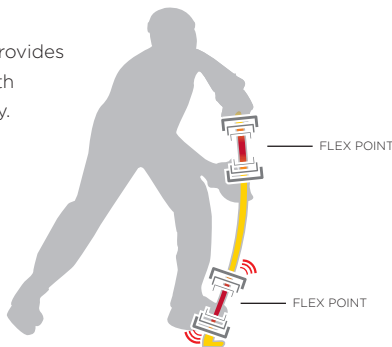

INTELLI-SENSE SHOT TECHNOLOGY

Through advanced engineering the flex profile of the shaft can now sense the type of shot based on the positioning of the player's hands. This results in maximized loading for optimal shot performance on wrist or slap shots.

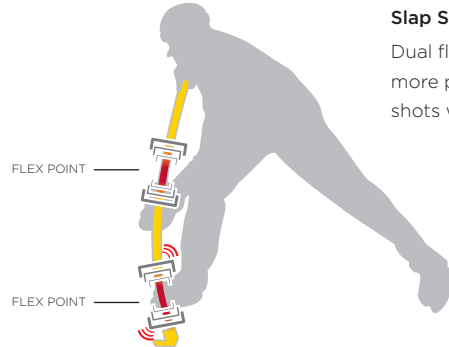

Wrist Shot:

Lower flex point provides quicker release with increased accuracy.

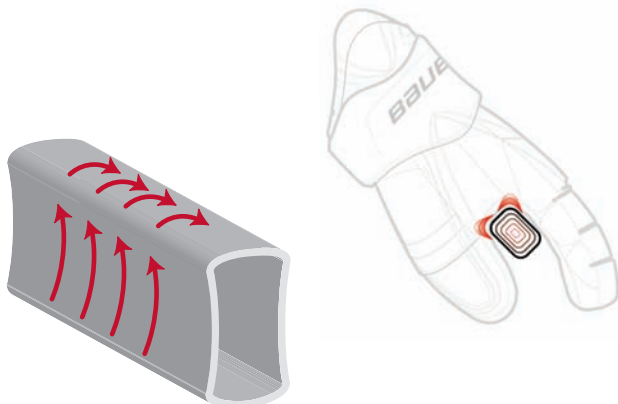

Slap Shot:

Dual flex points allow for more powerful, accurate shots with easier loading.

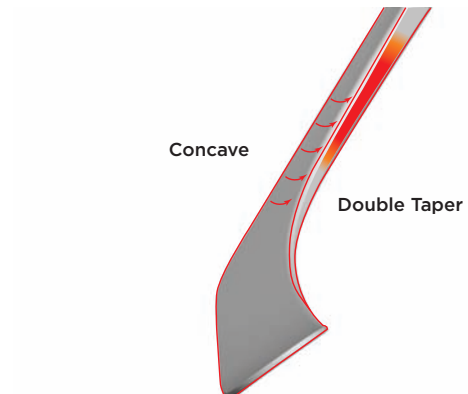

MICRO FEEL II SHAFT

Rounded corners and double concave shaft walls allow the shaft to fit comfortably in your hands. The result is easier puck handling and superior control.

VAPOR PREMIUM DUAL TAPER

The combination of Micro-Feel II shaft and a secondary taper along the top/bottom surface equals decreased torsional deflection for increased puck control and accuracy upon release.

Choose Your Advantage

SUPREME

STRENGTH & POWER

The power player that unloads explosive one-timers and bombs the heavy slapshot.

VAPOR

OPTIMAL BALANCE + FEEL

The crafty player that excels in puck-handling and quick-release shots.

Get the Pattern that Suits Your Style

PATTERN	LIE	CURVE	FACE	TOE	LENGTH
PM9 - STAMKOS passing / handling front & back	SR / INT: 5 JR: 4	MID-HEEL	OPEN	ROUND	MED

P14 - TOEWS ultimate shooters pattern / toe drags	SR / INT: 6 JR: 5	MID-TOE	SLIGHT-OPEN	ROUND	MED
P02 - KRONWALL toe drags / slapshots	SR / INT: 7	HEEL	OPEN	SQUARE	LONG

Find Your Flex

MODEL	FLEX	PLAYER PROFILE	CUTTING THE STICK DOWN CHANGES THE FLEX		
			2"	4"	6"
YTH	42	Kids are growing up with composite in today's hockey market, it should start with youth players.	49	57	67
JR	52	Generally for ages 8-12 where the skills are in early development. The softer flex will enhance puck velocity and increase release time.	60	68	77
INT	60	This flex was developed for the taller Pee-wee age player that has grown out of a junior stick but still needs to cut some length from the stick while still keeping an appropriate flex. It has a longer blade for controlling the puck.	65	70	75
INT	67	This flex is great for the Pee-wee-Bantam age player with smaller hands and can't quite use a senior shaft dimension but also wants the longer blade for controlling the puck.	74	80	87
INT	75	This flex was developed for the Bantam age or female player with smaller hands can't quite use a senior shaft dimension but also wants the longer blade for controlling the puck.	84	92	100
SR	77	For the player seeking maximum energy loading; this is the softest flex available in the market today in a senior shaft dimension.	84	92	100
SR	87	Probably the most popular flex rating today. This is for the player seeking a quick-release, whether it's a one-timer or streaking down the wing.	96	105	112
SR	102	This is for the player that has an arsenal of different shots within their game.	108	115	122
SR	112	Targeted for the bigger, stronger player that needs maximum stiffness when leaning into a shot. This stick is designed to withstand the maximum loading by today's power forward or defense.	118	125	132
